Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **sergej.kukshausen.me** for a **Personal services / B2B consulting (fractional engineering manager, fintech), single-page site** site, generated on October 16, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

76/100

SEO HEALTH SCORE

Critical Issues Found:

1. **High:** All five server-side items from the previous audit are still present: no security headers, 307 (not 301) http redirect, no Cache-Control on any asset, www host serves a self-signed Traefik cert and 503, manifest served as application/octet-stream
2. **High:** No third-party proof on the page (no testimonials, ratings, talks, press); Trust is the lowest dimension for every buyer persona and Authoritativeness scores 48/100
3. **High:** One URL carries four service intents with 25-40 words each; SERPs for those queries reward dedicated service pages and case studies
4. **High:** Entity visibility gap: name query does not surface the site, domain absent from Common Crawl graph, 0 of 6 owned profiles confirmed linking back, GitHub profile has no name/bio/website
5. **High:** Hero claim '11+ years in banking and fintech' contradicts the page's own timeline (banking starts 2018, about 8 years); role label differs across title, schema, llms.txt, CV and Xing

Quick Wins:

1. Fill in the GitHub profile (name, bio, website, location) and add a profile README linking to the site (5 min)
2. Change hero and meta description to '11+ years in software delivery, 8 in banking and fintech' (5 min)
3. Render the hero CTAs without scroll-reveal so the mobile call-to-action is visible on load (10 min)
4. Rewrite the first sentence of each service card to name Sergej, the service and the proof so extracted passages are citable (30 min)
5. Remove Person.telephone from JSON-LD and replace areaServed strings ('DACH', 'Remote') with typed Country/AdministrativeArea values (15 min)

2. Audit Categories

2.1 Technical SEO

Score: 72/100

What Works

- Valid apex HTTPS cert (expires 2026-12-21), HTTP/2, HTTP/3 advertised
- robots.txt valid with Content-Signal lines, AI crawler allow-list, Sitemap declared
- Self-referencing canonical, meta robots index,follow, lang=en, no noindex
- Static server-rendered HTML (not an SPA), content present without JS
- Preloaded font and LCP image, AVIF/WebP srcset, width/height on images, one small CSS and one small JS module
- security.txt (Expires 2027-10-16) and llms.txt present; custom 404 returns 404
- Full favicon set with correct MIME types

Findings

No security response headers High

curl -sI / returns no HSTS, CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy or Permissions-Policy; Server: nginx/1.24.0 disclosed. Unchanged since the previous audit (server-side, owner cannot change yet).

Recommendation: Add the nginx add_header block from findings/technical.md; ship CSP in Report-Only first because the page has one inline script; set server_tokens off.

www host broken: self-signed cert and no redirect High

https://www.sergej.kukshausen.me serves CN=TRAEFIK DEFAULT CERT and returns 503 with -k; http://www returns a bare 404. DNS A record points to the same IP as apex. Unchanged (server-side).

Recommendation: Add www to the Traefik router with a cert resolver and 301 it to the apex, or delete the www DNS record.

http -> https redirect is 307, not 301 Medium

HTTP/1.1 307 Temporary Redirect from the proxy. Unchanged (server-side).

Recommendation: Set the entrypoint redirect to permanent (Traefik redirectscheme.permanent=true or nginx return 301).

No Cache-Control on any asset Medium

HTML, CSS, JS, woff2, AVIF, JPG, SVG, PDF, robots and sitemap all lack Cache-Control/Expires; only ETag and Last-Modified. CSS/JS filenames are content-hashed. Unchanged (server-side).

Recommendation: location /assets/ -> public, max-age=31536000, immutable (hashed files only); fonts/images -> max-age=2592000; HTML -> no-cache.

site.webmanifest served as application/octet-stream Low

Content-Type should be application/manifest+json. Unchanged (server-side).

Recommendation: nginx types { application/manifest+json webmanifest; }

/index.html returns 200 and /README.md is publicly served Low

Both return 200. Canonical mitigates the index.html duplicate; README.md is only robots-disallowed and the Disallow sits only in the * group, so named AI bot groups may fetch it.

Recommendation: 301 /index.html -> /; stop deploying README.md to the web root (return 404) and drop the Disallow line.

No IndexNow key file discoverable Medium

No 32-hex key in HTML, llms.txt or robots.txt; /indexnow.txt, /indexnow-key.txt, /key.txt all 404. The rebuild claimed an IndexNow key; it could not be verified without the filename.

Recommendation: Host /<key>.txt (200, body = key exactly) and submit via indexnow_submit.py, or drop IndexNow if unused.

English only; DE/EN claimed with no German URL or hreflang Info

<html lang=en>, no hreflang, no /de/. The M/Text offer targets a German-speaking niche.

Recommendation: If DE pages are planned, use /de/ with reciprocal hreflang (en, de, x-default).

2.2 Content Quality

Score: 74/100

What Works

- Services section now exists with four named offers, scope, audience and proof line (fixes the main gap from the 69/100 audit)

- Concrete attributed outcomes: 31% infra cost, 12% MTTR, 21% launch time, 75% / EUR 180K
- Process section explains the buying path (20-min call, 1-2 week assessment, 3-6 month engagement) and contracting routes
- FAQ questions phrased as real buyer queries, answers name the entity
- Trust infrastructure: contact data, imprint, privacy, visible update date with <time datetime>
- content_quality.py: 90/100 on main text, no filler, no AI-typical phrasing; metadata_template.py site risk low
- E-E-A-T composite 70 (Experience 80, Expertise 72, Authoritativeness 48, Trustworthiness 80)

Findings

'11+ years in banking and fintech' contradicts the page's own timeline High

Hero and meta description say 11+ years in banking/fintech; the timeline shows banking work starting at Capgemini in 2018 (about 8 years). About text and schema correctly say 'banking, fintech and Industry 4.0'.

Recommendation: Use '11+ years in software delivery, 8 in banking and fintech' in hero and meta description; keep schema and copy consistent.

No third-party validation (Authoritativeness 48/100) High

No testimonials, recommendation quotes, Malt/Upwork ratings, client logos, talks, articles or press. Every claim is self-reported. The AI-skills service has no outcome metric.

Recommendation: Add 2-3 attributed quotes (name + role), show Malt/Upwork rating once available, link a public talk or GitHub skill repo as proof for the AI-skills offer.

Each service is thin (25-35 words) with no dedicated service URL High

One homepage cannot rank for four commercial intents (fractional EM fintech, mainframe to AWS consultant, M/Text Berater, AI skills rollout).

Recommendation: Build 2-4 service pages of 800+ words (start with mainframe-to-AWS and fractional EM) with problems, approach, deliverables, SAR case study, FAQ, CTA; link from service cards.

DE/EN positioning with no German content Medium

Eyebrow says DE/EN; no German copy outside Impressum/Datenschutz labels; M/Text (DACH) offer is English-only.

Recommendation: Add /de/ for the homepage and M/Text service with reciprocal hreflang; native German copy.

Proof metrics repeated 3-4 times; EUR 2.2M heading unexplained Medium

31% and 12% appear 4 times each, 75% and 180K three times; full-HTML repetition score 33 (flag repetitive). 'EUR 2.2M Digital Transformation' never says what the figure is.

Recommendation: Keep the headline metric in the stat strip and project card; replace repeats with new detail (scale, timeline); spell out the EUR 2.2M programme budget.

Availability alongside the Fiserv role is unclear Medium

'In-house at Fiserv, and open to fractional...' plus '2 to 5 days a week' with no start date or capacity statement.

Recommendation: Add one factual availability sentence and a FAQ 'How does this fit with your role at Fiserv?'

FAQ answers short, some non-responsive, voice mismatch Medium

The AI-rollout answer describes Sergej rather than a method; no definitional sentences; 'Is that you?' answered in third person.

Recommendation: Expand each answer to 40-80 words, open with a direct answer, add a 'What is a fractional engineering manager?' definition; answer 'you' questions in first person.

Generic dictionary tooltips and CV boilerplate phrasing Low

Toolkit entries like 'HTML5: Standard markup language...'; About paragraph switches from third to first person; 'passionate about' phrasing.

Recommendation: Rewrite tooltips as 'where I used it' or drop low-signal items; split the About opener; cut abstract methods for concrete actions.

No language proficiency levels or certification years Low

German, Russian, English, Hungarian listed without levels; schema lists Russian while page says DE/EN.

Recommendation: Add levels and certification years; align schema knowsLanguage with the page.

2.3 On-Page SEO

Score: 76/100

What Works

- Title 62 chars and meta description 158 chars, unique, within length, includes name, role, location, offers
- Clean heading tree: one H1, seven H2s mapped to nav anchors, H3 per item

- No templated metadata (site_risk low)
- Self-referencing canonical; descriptive image alt text

Findings

H1 omits the primary commercial keyword and the name Medium

H1 'Engineering Leadership for Mission-Critical Payment Platforms'. Title targets 'Fractional Tech Lead' which never appears in visible copy; body uses 'fractional engineering management'; 'fractional engineering manager' appears only in a FAQ question.

Recommendation: Pick one primary term. Example H1: 'Fractional Engineering Manager for Payment and Banking Platforms'; title: 'Sergej Kukshausen | Fractional Engineering Manager, Fintech & Mainframe-to-AWS'.

'Book a 20-min call' CTA leads to a message form Medium

Hero CTA and four 'Talk about this' links all go to #contact; no scheduler on the page; the form handler never preselects the topic from the clicked card.

Recommendation: Embed Cal.com/Calendly or relabel to 'Request a 20-min call'; add data-topic on card CTAs and set select#topic on click.

Internal linking limited to anchors Low

Internal links are nav anchors, CV PDF (x2), privacy and imprint. No crawlable depth, nothing for others to link to.

Recommendation: Follows from the service-pages recommendation; link new pages from cards, project cards and FAQ answers with descriptive anchors.

Four identical 'Talk about this ->' link names Low

Same accessible name on four cards; agents and screen readers cannot tell which service each refers to.

Recommendation: Add per-card aria-label or specific labels ('Discuss a migration ->').

2.4 Schema / Structured Data

Score: 80/100

What Works

- One valid JSON-LD @graph (9.5 KB) in raw HTML: WebSite, ProfilePage, Person, FAQPage, Service x4, Offer x4, ImageObject
- All @id references resolve (#person, #website, #profilepage, #portrait); ProfilePage.mainEntity is the Person

- dateModified matches visible 'Updated 16 October 2026'
- All 6 FAQ Q/A match visible text verbatim
- Person is rich: jobTitle, image, address, alumniOf, hasCredential, knowsAbout (16), knowsLanguage, sameAs (5 profiles)
- BreadcrumbList correctly omitted

Findings

Person.telephone is in markup but not visible on the page Medium

'+36' does not appear in visible text. Conflicts with Google's content guideline and exposes a personal mobile number to scrapers.

Recommendation: Remove telephone from JSON-LD or publish it visibly.

areaServed uses non-place strings ('EU', 'DACH', 'Remote') Medium

Repeated on all four Services. 'Remote' is not a place.

Recommendation: Use typed Country (Germany, Austria, Switzerland, Hungary) and AdministrativeArea (European Union); express remote delivery in the description.

No business entity beyond the Person (optional) Medium

Commercial offering hangs off Person.makesOffer; no ProfessionalService node. Only add if trading as a business.

Recommendation: Keep Person primary. Optionally add ProfessionalService #business with founder -> #person and hasOfferCatalog. Never mark up a fake storefront.

ProfilePage lacks dateCreated; dateModified is date-only Low

Google recommends both with full ISO 8601.

Recommendation: Add dateCreated and use 2026-10-16T09:00:00+02:00; regenerate dateModified with the visible <time> on real content changes.

Fiserv worksFor is a bare Organization; Xing sameAs differs from page link Low

worksFor has only a name. Schema sameAs uses /profile/Sergej_Kukshausen; page links /cv.

Recommendation: Add url https://www.fiserv.com and an @id; use one canonical Xing URL everywhere.

FAQPage markup has no SERP value Info

Google retired FAQ rich results for all sites on 7 May 2026. Markup is valid and matches visible content.

Recommendation: Keep as a machine-readable summary or drop it; do not expand it.

CV PDF not referenced in schema Info

Linked twice on the page but absent from the graph.

Recommendation: Optional subjectOf DigitalDocument with absolute contentUrl.

2.5 Performance (CWV)

Score: 82/100

What Works

- Lab LCP 324 ms desktop / 792 ms throttled mobile; CLS 0 on both; TTFB ~190 ms
- Brotli on HTML and CSS; HTTP/2 confirmed, h3 advertised
- One render-blocking resource (6.8 KB CSS); JS is a deferred 3 KB module
- Variable woff2 font preloaded with font-display: swap and metric-adjusted fallbacks; CLS 0 across swap
- Hero <picture> AVIF > WebP > JPG with 356w/712w srcset, width/height, fetchpriority=high
- Small DOM (495 elements), no third-party scripts, no bfcache blockers

Findings

No Cache-Control on any asset High

Confirmed on HTML, CSS, JS, font and portrait: only ETag and Last-Modified (deploy time), so every repeat visit revalidates up to 43 assets. Server-side, blocked by owner constraint.

Recommendation: When possible: immutable one-year cache on hashed /assets/ files, 30-day on un-hashed font/ images, no-cache on HTML.

Desktop hero preload mismatches the image actually used Medium

Preload fetches the 712w AVIF (30.8 KB) but sizes=356px at DPR 1 selects the 356w file; both downloaded, preload did not help LCP. On mobile the preload is excluded by the media query.

Recommendation: Use <link rel=preload as=image imagesrcset=... imagesizes=356px fetchpriority=high> mirroring the <picture>.

Hero text reveal gated on JS Low

Mobile LCP element is the hero paragraph, hidden by .js .word{opacity:0} until the module runs and transitions 0.5-0.7 s.

Recommendation: Keep H1 and LCP paragraph visible by default; animate only decorative parts.

Vite modulepreload polyfill stub and 32 separate skill-icon SVGs Low

style-Co4MXWWd.js (670 B) is an unneeded polyfill; 32 lazy SVG requests (~40 KB) are costly without caching.

Recommendation: build.modulePreload = { polyfill: false }; combine icons into one SVG sprite.

Field data unavailable Info

No Google API key: PSI, CrUX and lcp_subparts.py could not run. Lab values suggest 'good' LCP/CLS; real-user p75 is unverified.

Recommendation: Add a PSI/CrUX API key and rerun /seo google cwv for field data.

2.6 AI Search Readiness

Score: 75/100

What Works

- Every AI search, user-fetch and training crawler explicitly allowed; Content-Signal syntax valid in all 15 groups; no WAF blocking for GPTBot/ClaudeBot/PerplexityBot UAs
- Server-rendered HTML: all content, JSON-LD and FAQ visible without JS (1,448 words)
- llms.txt present, well-formed, every internal URL resolves 200
- Freshness signals agree: visible date, dateModified, sitemap lastmod, llms.txt
- FAQ answers start with the named entity and a number (most citable content)
- Accessibility tree: 764 nodes, 0 unnamed interactive elements, header/nav/main/footer landmarks, all form fields labelled (agent_ux_check 100/100)
- security.txt valid with Contact and Expires
- Score blends GEO 69 (70%) and Agent Readiness 88 (30%)

Findings

Service-card passages lose their subject when extracted High

Passage extractors drop H3s, leaving fragments like 'Modernise banking document workflows and output management.' with no name or service. 'EUR 2.2M' appears only in a heading.

Recommendation: Start each card with a self-contained sentence: name + service + proof (rewrites in findings/geo.md).

Role label differs across sources High

Title: 'Engineering Manager & Fractional Tech Lead'; schema/CV: 'Engineering Manager, Software Development'; llms.txt: 'fractional technical leader'; CV Fiserv entry: 'Technical Project Manager / Team Lead'; Xing: 'IT Projektmanager'.

Recommendation: Use 'Engineering Manager at Fiserv' + 'Fractional Engineering Manager' everywhere: title, schema jobTitle, llms.txt, CV, Xing, LinkedIn, GitHub.

No definitional passage for the main service; three FAQ answers thin Medium

Nothing defines fractional/interim engineering management; the AI-rollout, Jira-agent and German-speaking answers lack method, example or number.

Recommendation: Add a 'What is a fractional engineering manager?' FAQ and the three rewritten answers from findings/geo.md.

Weak off-site authority; GitHub profile empty Medium

GitHub API: name null, bio null, blog empty, location null. No testimonials, no credential verification links.

Recommendation: Fill in GitHub profile and README; add 2-3 named testimonials; link PSM I certificate URL as hasCredential.url.

llms.txt overstates the page Medium

Lists 6 services (page has 4) and a Keywords block with terms absent from the page ('Claude expert', 'Freiberuflicher IT-Projektleiter').

Recommendation: Drop the Keywords block; match the four on-page services; keep llms.txt a strict summary.

IndexNow key not discoverable; README.md reachable by named AI bots Medium

No key referenced; Disallow: /README.md only in the * group.

Recommendation: Host /<key>.txt or drop IndexNow; remove README.md from the web root.

Multi-modal content thin; no Markdown delivery or WebMCP (optional) Low

Two photos and icons only; Accept: text/markdown returns HTML; no navigator.modelContext tools.

Recommendation: Add one before/after architecture diagram and an HTML case table; Markdown and WebMCP are optional opportunities.

2.7 Images

Score: 82/100

What Works

- 38 <img> tags: all content images have descriptive alt, decorative icons alt='' aria-hidden
- Portrait and casual photo in <picture> with AVIF/WebP/JPEG fallback and srcset
- width/height on portrait (356x520), casual (494x593) and all 29 skill icons
- Portrait eager + fetchpriority=high; everything below the fold lazy with async decode

Findings

og:image is a 712x1040 portrait with summary_large_image High

Large-image cards expect 1.91:1 (1200x630); face will be cropped and LinkedIn may show a tiny thumbnail. No og:image:width/height/alt/type or twitter:image:alt.

Recommendation: Create a 1200x630 card (portrait + name + title) and add the missing meta tags.

Casual photo JPEG fallback is 252 KB Medium

Largest asset on the site; only served to browsers lacking AVIF/WebP.

Recommendation: Recompress to ~80 KB.

7 contact icons lack width/height Low

Small SVGs sized via CSS; minor CLS risk.

Recommendation: Add width/height (e.g. 20x20).

2.8 Sitemap

Score: 90/100

What Works

- Declared in robots.txt, validated urlset, well-formed, 326 bytes, 2 URLs, no priority/changefreq bloat

- / returns 200 with matching canonical and index,follow; CV PDF 200 application/pdf, indexable
- /llms.txt and /README.md correctly excluded

Findings

> **lastmod values look deploy-stamped** Low
>
> / lastmod equals the deploy time; PDF lastmod 2026-07-24 disagrees with its server Last-Modified of 2026-10-16.
>
> **Recommendation:** Set lastmod from the real content-edit date; preserve file mtime on deploy.

> **PDF in sitemap is optional; sitemap headers minimal** Low
>
> PDF can compete with the HTML page for name queries; sitemap served as text/xml with no Cache-Control or gzip.
>
> **Recommendation:** Optionally add Link rel=canonical on the PDF response; serve sitemap as application/xml with max-age=3600.

2.9 Visual / UX

Score: 80/100

What Works

- Desktop 1440x900: H1, value prop, 4 proof stats, both CTAs and crisp AVIF portrait all above the fold
- CLS 0 desktop and mobile; strong contrast; base font 16px
- Services, impact, process, toolkit, FAQ accordion, contact form and footer clean and legible

Findings

> **Mobile primary CTA invisible above the fold** High
>
> At 390x844 the 'Book a 20-min call' wrapper stays at opacity 0 / translateY(28px) until a scroll event; mobile-above-fold.png shows stats then empty space. Header nav has no CTA on mobile.
>
> **Recommendation:** Render hero CTAs at opacity 1 (no scroll-reveal) or fire the observer on load; move CTA directly under the sub-copy, stats after.

> **Possible mobile horizontal overflow** Medium
>
> body.scrollWidth 431 vs 390 viewport (.blob-1/2/3 and p.tooltiptext); currently clipped but fragile on iOS Safari.
>
> **Recommendation:** overflow-x: clip on the blob wrapper; clamp tooltip width.

Small tap targets on mobile Medium

Nav links 20px tall, 'Talk about this' 32px, contact/footer links 18-23px; target is 44px.

Recommendation: min-height 44px with padding on nav, card links, contact and footer links; 8px spacing.

Mobile nav crowded with no CTA; low placeholder contrast; centered long paragraphs Low

Five inline links, ~117px sticky header; placeholder ~3:1 contrast; impact cards centered 8-9 line paragraphs.

Recommendation: Collapse header on scroll, add a header 'Book a call' button, darken placeholders to 4.5:1, left-align body copy.

2.10 Search Experience (SXO)

Score: 60/100

What Works

- Hero eyebrow states name, role, Budapest, DE/EN, remote; 4 outcome stats; CV PDF above the fold
- Each service card says who it is for and gives a proof line
- 3-step process and 6 buyer-phrased FAQs
- Contact form with topic select, honeypot, aria-live status, one-business-day reply promise
- Persona scores: recruiter 74, CTO interim lead 65, fintech VP Eng 60, DACH hiring manager 54

Findings

Page-type mismatch: one URL for four service intents High

None of six queried SERPs had a personal site in the top 9; they reward dedicated service pages, aggregators (fratch, freelancermap) and case studies.

Recommendation: Publish /mainframe-to-aws-migration-banking/, /fractional-engineering-manager/ and /mt-output-management/; keep the homepage as entity hub.

Name query does not surface the site High

WebSearch 'Sergej Kukshausen' returned only name variants; page is indexable, so this is a discovery/authority gap. Must be confirmed in Search Console.

Recommendation: Verify in GSC, request indexing, add bidirectional rel=me links from LinkedIn, Xing, GitHub, Malt, Upwork.

Availability and capacity ambiguous; no pricing anchor High

'Engineering Manager at Fiserv' + '2 to 5 days a week' with no start date; 'Day rate on request' against SERPs showing EUR 485-885/day ranges.

Recommendation: Add a factual availability line, a Fiserv-fit FAQ, and a rate band or 'from EUR X/day'.

Migration proof too thin for the SERP format; H1 omits service terms Medium

One card and one FAQ answer versus full case studies naming scale, stack and approach. H1 has no 'fractional', 'interim', 'mainframe' or 'AWS'.

Recommendation: Expand the Fiserv migration into a case study with a before/after diagram; rewrite the H1 with service terms.

English-only page for a DACH offer Medium

DACH SERP is German-language marketplaces and job pages.

Recommendation: Build /de/ with hreflang, a German H1, a rate line, and freelancermap/fratch profiles.

2.11 Backlinks / Authority

What Works

- Clean outbound profile: five identity platforms with rel='noopener me' matching schema sameAs
- No toxic signals observable

Findings

Domain absent from the Common Crawl graph High

cc-main-2026-jan-feb-mar: kukshausen.me and sergej.kukshausen.me not in crawl; PageRank, harmonic centrality, in-degree null. Does not prove zero backlinks (domain-level, confidence 0.50).

Recommendation: Acquire links per the plan in findings/backlinks.md; recheck after the next CC release.

0 of 6 owned profiles confirmed linking back High

GitHub: no site link, API blog field empty, no profile README (kukshaus/kukshaus main 404). LinkedIn 405, Xing JS-rendered, Malt/Upwork 403 to the crawler.

Recommendation: Set the website field on every profile; create the GitHub profile README; confirm the rest by hand.

Single-page site has no linkable assets Medium

All internal links are anchors on one URL.

Recommendation: Add 2-4 case-study pages or a tool/checklist.

Moz, Bing Webmaster and Keywords Everywhere keys not configured Info

Referring domains, anchors, spam score, velocity, nofollow ratio and competitor gap are unknown.

Recommendation: Add free Moz and Bing keys and rerun /seo backlinks for a numeric score.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Server (when access allows): add security headers (CSP Report-Only first), make the http redirect 301, add Cache-Control, fix or remove www, set manifest MIME
- Fix the '11+ years in banking' claim in hero and meta description
- Render mobile hero CTAs without scroll-reveal; verify with a 390x844 screenshot
- Create a 1200x630 OG image and add og:image:width/height/alt and twitter:image:alt
- Fill in the GitHub profile and README; set the website field on LinkedIn, Xing, Malt, Upwork
- Verify the brand query and request indexing in Search Console

Phase 2: High-Impact Improvements Weeks 2-3

- Add 2-3 attributed testimonials and a factual availability line plus a 'How does this fit with Fiserv?' FAQ
- Rewrite the four service cards so the first sentence names Sergej, the service and the proof; spell out the EUR 2.2M
- Standardise the role label across title, H1, schema jobTitle, llms.txt, CV, Xing, LinkedIn, GitHub
- Rewrite the H1 with the primary term (fractional engineering manager) and align the title
- Embed a scheduler or relabel the CTA; make card CTAs preselect the form topic and carry aria-labels
- Schema: remove telephone, typed areaServed, dateCreated, Fiserv url, one Xing URL
- llms.txt: drop the Keywords block, match the four services
- Fix hero preload (imagesrcset/imagesizes); add 44px tap targets; clip mobile overflow
- Host the IndexNow key file or drop IndexNow; remove README.md from the web root

Phase 3: Content & Authority Month 2

- Publish /mainframe-to-aws-migration-banking/ as a case-study page with a before/after diagram and scope numbers (team size, volume, timeline)
- Publish /fractional-engineering-manager/ with fit/no-fit guidance, first-30-days plan, engagement models and a rate band
- Publish /mt-output-management/ for the empty supply side of the M/Text SERP
- Add the 'What is a fractional engineering manager?' FAQ and expand the three thin answers to 40-80 words
- Build /de/ with reciprocal hreflang and list on freelancermap and fratch
- Trim the toolkit to 10-12 outcome-tied tools; add an HTML case table
- Start link acquisition: fractional-exec directories, one GitHub project tied to a case study, one guest post or podcast

Phase 4: Monitoring & Iteration Ongoing

- Configure a Google API key (PSI/CrUX) and Search Console access, then rerun /seo google cwv and /seo audit for field data
- Add free Moz and Bing Webmaster keys and rerun /seo backlinks for a numeric authority score
- Capture a drift baseline (/seo drift baseline) after Phase 2 and compare after each deploy
- Drive lastmod and the visible 'Updated' date from real content edits, not build time
- Renew the apex certificate before 2026-12-21 and security.txt before 2027-10-16

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 16, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
