Table of Contents

1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **sergej.kukshausen.me** for a **Personal brand / portfolio (engineering manager, freelance consulting intent)** site, generated on October 16, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

69/100

SEO HEALTH SCORE

Critical Issues Found:

1. llms.txt links to three pages that return 404 and claims a FAQ that does not exist
2. The HTML and llms.txt describe two different offers (employed EM vs freelance consultant); the freelance intent has zero indexable support
3. www host serves a certificate mismatch / 503 and HTTP to HTTPS is a 302
4. No security headers and no Cache-Control on any response
5. Font swap causes a measurable layout shift (CLS 0.094 lab, 0.187 with reduced motion)

Quick Wins:

1. Delete or publish the three dead llms.txt links (5 minutes)
2. Replace the Person JSON-LD with the generated ProfilePage graph (10 minutes)
3. nginx: 301 redirect, HSTS + security headers, Cache-Control map, manifest MIME type (30 minutes)
4. Trim sitemap.xml to / and the CV PDF; fix index.html footer links (10 minutes)
5. Add crossorigin to the font preload and a size-adjusted fallback face (20 minutes)

2. Audit Categories

2.1 Technical SEO

Score: 71/100

What Works

- Static, server-rendered HTML (870 words without JS)
- HTTP/2 + HTTP/3, brotli and gzip available
- Real 404s for unknown paths, no mixed content
- robots.txt and sitemap.xml present and declared
- Valid viewport and mobile layout, no horizontal overflow

Findings

www host is broken High

www.sergej.kukshausen.me resolves (A record 194.164.198.82) but serves a certificate mismatch over HTTPS and 404 over HTTP; nginx answers 503 behind the bad cert.

Recommendation: Issue a certificate covering both hosts (certbot -d sergej.kukshausen.me -d www.sergej.kukshausen.me) and add a server block returning 301 https://sergej.kukshausen.me$request_uri.

No security headers on any response High

HSTS, CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy and Permissions-Policy are all absent on pages and assets.

Recommendation: Add the nginx add_header set from findings/technical.md (CSP connect-src https://api.web3forms.com).

HTTP to HTTPS redirect is temporary (302/307) High

GET returns 302, HEAD 307; never 301. Combined with no HSTS every cold visit makes an insecure round trip.

Recommendation: Use return 301 in the port-80 server block and enable HSTS with max-age=31536000.

Entrance animation hides the LCP element Medium

CSS sets H1 words and hero paragraph to opacity:0 and staggers them; Chrome ignores opacity-0 elements for LCP, adding ~1 s on mobile (0.69 s vs 2.18 s lab).

Recommendation: Animate only transform/translate, keep opacity at 1, or start at opacity 0.01 and only for non-LCP elements.

No Cache-Control on hashed assets Medium

Vite content-hashed CSS/JS/fonts ship without Cache-Control; browsers revalidate every visit.

Recommendation: nginx map: immutable max-age=31536000 for /assets/*, 30d for images, no-cache for HTML.

Duplicate homepage URL via index.html Medium

Footer links on imprint/privacy point to index.html, which serves a 200 copy of /.

Recommendation: Link to / and 301 /index.html to /.

site.webmanifest served as application/octet-stream Low

Wrong MIME type for the manifest.

Recommendation: Add 'application/manifest+json webmanifest;' to nginx mime.types.

No IndexNow key Low

bingbot is welcomed in robots.txt but no IndexNow key file exists.

Recommendation: Generate a key, host /<key>.txt, submit via indexnow_submit.py after deploys.

2.2 Content Quality

Score: 64/100

What Works

- Clean, human copy: content_quality.py 93/100, no filler or AI patterns
- Metadata is specific, not templated
- Imprint (469 words) and privacy (1,173 words) are complete legal pages
- Concrete outcomes quoted (31% cost reduction, 21% faster launches)

Findings

HTML and llms.txt describe different offers High

The page says 'Engineering Manager, Software Development' and contains zero occurrences of freelance, consultant, fractional, interim, hire, remote or DACH. llms.txt opens with 'freelance technical leader ... via Upwork, Malt' and

lists nine services. Claims that exist only in llms.txt have no indexable support.

Recommendation: Add a 'How I can help' services section and Upwork/Malt links to the HTML; use one role string across title, H1, schema and profiles.

llms.txt promises content that does not exist High

Three linked articles return 404, it claims a homepage FAQ (none exists), and it is dated 2026-07-24 while the page changed 2026-10-16.

Recommendation: Publish the three articles or delete the lines; add the six 'typical client questions' to the page as H2/H3 with answers.

Ten quantified claims, none with baseline or attribution Medium

31%, 12%, 21%, 75%, 27%, 100%, EUR 2.2M, EUR 180K, 3 audits: no metric definition, period or source.

Recommendation: Rewrite each as 'from X to Y over Z months, measured by W'; see rewrite examples in findings/content.md.

No third-party voice Medium

No testimonials, recommendations, publications or named repositories; authority rests on bare profile links.

Recommendation: Quote two LinkedIn recommendations with name and role; link two public repos or a talk.

No date signals Medium

No <time>, no dateModified; the renderer inferred 2026-01-01.

Recommendation: Add a visible 'Updated <date>' line and dateModified in schema.

Privacy page cites a dead mirror Low

privacy.html references kukshaus.github.io, which returns 404.

Recommendation: Remove or fix the reference.

2.3 On-Page SEO

Score: 70/100

What Works

- Unique title (64 chars) and description on the homepage
- Self-canonical, OG and Twitter cards present
- All 36 images have alt text and explicit dimensions
- Single H1, logical H2/H3 outline

Findings

H1 contains the location eyebrow Medium

The accessible heading reads 'Sergej Kukshausen | Budapest Engineering Leadership for Mission-Critical Platforms' because the eyebrow sits inside the H1.

Recommendation: Move '| Budapest' to a <p> above the H1; H1 = name + one role phrase.

Sitemap lists noindex pages Medium

imprint.html and privacy.html carry noindex,follow (no canonical) yet appear in sitemap.xml together with llms.txt.

Recommendation: Reduce the sitemap to / and the CV PDF (proposal in findings/sitemap.md); drop changefreq/priority.

Legal pages lack canonicals Low

imprint.html and privacy.html have no rel=canonical.

Recommendation: Add self-canonicals.

Duplicate CV URL Low

/Sergej_Kukshausen_CV.pdf and /assets/sergej-kukshausen-cv.pdf are byte-identical.

Recommendation: Keep one, 301 the other, list it in the sitemap.

Duplicate theme-color and legacy meta keywords Low

theme-color appears twice; meta keywords is ignored by Google.

Recommendation: Remove duplicates; keywords tag is harmless but dead weight.

36 outbound vendor links in the toolkit Low

Every logo is a target=_blank link to a vendor site; the section is the second screen and leaks link equity and attention.

Recommendation: Cut to ~12 logos, show labels, drop the outbound links.

2.4 Schema / Structured Data

Score: 58/100

What Works

- One valid Person JSON-LD block with sameAs, address, telephone, knowsLanguage
- No deprecated types, no syntax errors

Findings

No ProfilePage wrapper High

Person floats without page or site context; Google documents ProfilePage with mainEntity Person for personal pages.

Recommendation: Replace the block with the generated @graph (WebSite + ProfilePage + ImageObject + Person) in findings/generated-schema.json.

Person lacks @id, image, description High

Portrait and meta description exist but are not referenced in schema.

Recommendation: Included in the generated graph (@id https://sergej.kukshausen.me/#person).

Employer, education, certifications, expertise missing Medium

No worksFor, alumniOf, hasCredential, knowsAbout, hasOccupation.

Recommendation: Generated: worksFor Fiserv, alumniOf TU Bergakademie Freiberg, 3 credentials, 16 knowsAbout.

sameAs incomplete and inconsistent Medium

Upwork and Malt missing; Xing URL differs between schema and llms.txt.

Recommendation: Normalise to five sameAs URLs and link them on-page.

email uses mailto: prefix Low

Tolerated but non-standard.

Recommendation: Use the bare address.

2.5 Performance (CWV)

Score: 84/100

What Works

- Critical path is 6 same-origin requests / 114 KB, zero third parties
- TTFB 100-175 ms, desktop LCP 0.28 s, TBT ~12 ms
- Brotli installed, HTTP/3 enabled
- Lab mobile LCP 2.18 s (Good)

Findings

Font swap causes layout shift High

Lexend Deca is ~11% wider than the fallback; at swap the H1 re-wraps from 4 to 6 lines (+82 px). Lab CLS 0.094, 0.187 with reduced motion, 0 with font cached. The emitted size-adjust:100% is a no-op. Font preload also lacks crossorigin so the woff2 downloads twice.

Recommendation: Add local() fallback @font-face with size-adjust ~111% (Arial) / ~102% (Roboto) plus ascent/descent overrides, or font-display: optional; add crossorigin to the preload.

No Cache-Control anywhere High

Hashed bundles revalidate every visit; shared Last-Modified resets caching each deploy.

Recommendation: nginx map config in findings/performance.md.

Reveal animation gates mobile LCP Medium

Hero paragraph is opacity:0 with 700 ms delay; LCP 2.18 s vs 0.69 s without it.

Recommendation: Exclude the LCP element from data-reveal.

Portrait preload is below the fold on phones Medium

Preloaded at high priority (y=840 on an 823 px viewport) ahead of the font.

Recommendation: Add media="(min-width:768px)" to the preload and use <picture>/srcset.

Compression and image weight Low

gzip wins negotiation over brotli; gzip applied to woff2/webp/pdf; sergej-casual.webp is 240 KB (60% of page bytes) with no AVIF/srcset.

Recommendation: Prefer br, exclude already-compressed types, add AVIF + srcset.

2.6 AI Search Readiness

Score: 68/100

What Works

- robots.txt allows all 16 named AI crawlers; all tested UAs get full HTML
- llms.txt exists and follows the spec structure
- Contact form is agent-usable (labels, no CAPTCHA, aria-live confirmation)
- Accessibility tree clean: landmarks, named links, agent_ux_check 100/100

Findings

llms.txt links to three 404 pages Critical

3 of 5 links under '## Pages' are dead; agents following them hit dead ends.

Recommendation: Publish or remove them (patch in findings/agentic-drafts/llms.txt.patch.md).

Freelance positioning has no indexable support High

Freelance/interim/fractional/Upwork/Malt/Claude expert: 0 occurrences in HTML vs 30+ in llms.txt; AI engines corroborate across surfaces.

Recommendation: Add a 'Work with me' section, Upwork and Malt links, one consistent role string.

No question headings or entity sentence Medium

No 'X is Y' first sentence, no question H2s, H1 is three fragments; citability 60/100.

Recommendation: Add 'Sergej Kukshausen is ...' opener and the six client questions as headings with direct answers.

No Content-Signal in robots.txt Low

llms.txt says training/indexing/citation allowed, but no Content-Signal line exists.

Recommendation: Apply findings/agentic-drafts/robots.txt.draft-ai-train-yes (or -no) inside each UA group.

No Markdown delivery, README exposed Low

Accept: text/markdown returns HTML; /README.md is served and names the private source repo.

Recommendation: Optional nginx negotiation for .md; block or remove README.md.

Lighthouse Agentic Browsing not measured Info

PSI returned 429 (anonymous quota exhausted, no Google API key).

Recommendation: Add a Google API key and rerun /seo agentic lighthouse.

2.7 Images

Score: 72/100

What Works

- All images have alt text and width/height
- Hero portrait is WebP (55 KB) and preloaded
- Skill icons are SVG with lazy loading

Findings

Largest image has no srcset or AVIF Medium

sergej-casual.webp is 240 KB, 60% of page bytes.

Recommendation: Serve AVIF + WebP via <picture> with 2-3 widths.

OG image is JPEG, not the optimised portrait Low

og:image points to sergej-portrait.jpg (70 KB) while the page uses the WebP.

Recommendation: Fine for social crawlers; consider a dedicated 1200x630 OG image.

Portrait preload fires on mobile where it is below the fold Low

Competes with the font for bandwidth.

Recommendation: Scope the preload with a media attribute.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Remove or publish the three 404 article links in llms.txt; drop the FAQ claim until a FAQ exists
- nginx: 301 HTTP to HTTPS, HSTS, CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, Permissions-Policy
- Fix www: certificate covering both hosts + 301 to apex
- Cache-Control map for hashed assets; manifest MIME type; 301 /index.html to /
- Trim sitemap.xml to indexable URLs; add self-canonicals to legal pages

Phase 2: High-Impact Improvements Weeks 2-3

- Replace Person JSON-LD with the generated ProfilePage @graph (findings/generated-schema.json)
- Decide the positioning: add 'How I can help' services section, availability eyebrow, dual CTA (Book a call / Download CV), Upwork + Malt links
- Move the eyebrow out of the H1; fix 2.23:1 contrast; move primary CTA above the mobile fold
- Font: size-adjusted local() fallback + crossorigin on preload; exclude LCP element from the reveal animation; scope portrait preload to desktop
- Add the six client questions as H2/H3 with answers; add an 'Updated' date and dateModified

Phase 3: Content & Authority Month 2

- Write the mainframe-to-AWS case study as a standalone page (Challenge/Action/Result with baselines)
- Publish the three articles llms.txt already advertises, or retire them for good
- Add two quoted LinkedIn recommendations and link two public repos or a talk
- German /de/ page with hreflang for DACH queries (IT-Projektleiter, Cloud-Migration AWS Berater, M/Text Berater)
- Owned backlinks: GitHub profile URL + repo READMEs + rel=me, Upwork/Malt/Xing profile URLs, Sessionize/meetup bios

Phase 4: Monitoring & Iteration Ongoing

- Add a Google API key and connect Search Console; rerun /seo google and /seo agentic lighthouse for field CWV and the Agentic Browsing fraction
- Capture a drift baseline: /seo drift baseline https://sergej.kukshausen.me
- Set up IndexNow key and submit after each deploy

- Monthly: check ChatGPT Search / Perplexity for 'freelance engineering manager fintech Budapest' citations
- Set up Moz or Bing Webmaster credentials for backlink tracking

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 16, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
